

Description:

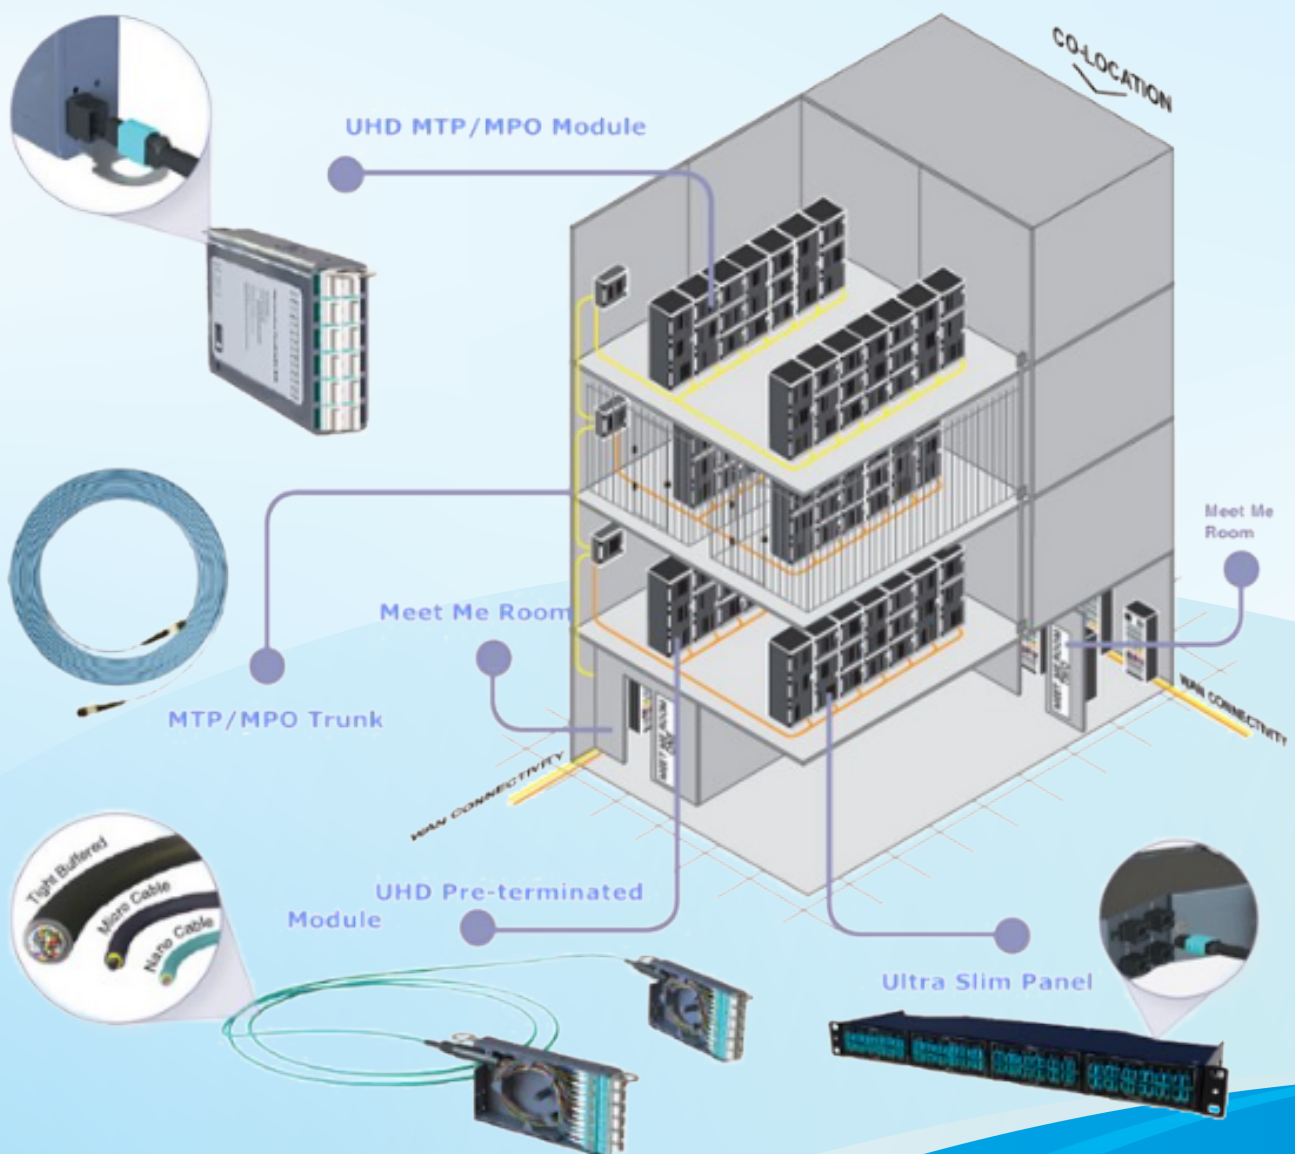

Due to the compact design of the MTP/MPO connector, the MTP/MPO patch cord has multi cores and small size.

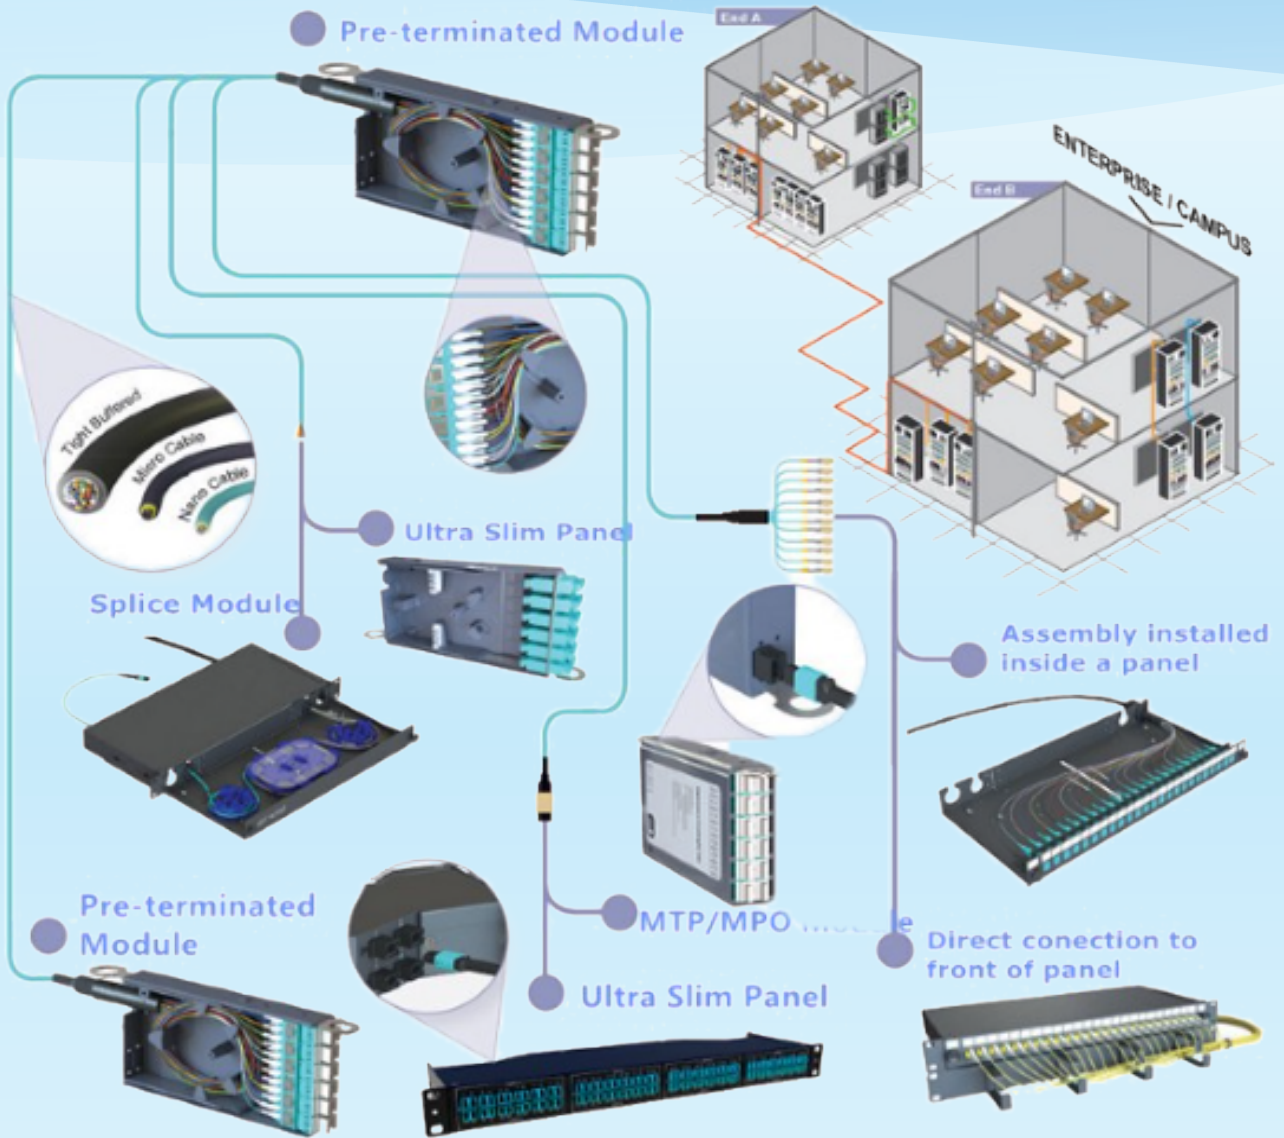

MTP/MPO jumpers are available in a variety of high-density cabling systems, fiber-optic communication systems, cable television networks, telecommunications network LANs, wide area networks, and FTTx.

40G and 100G networks MTP/MPO Solution is a technique enabling multi-fiber connections to be used for data transmission.

The high fiber count creates the endless possibilities of high-density patching. The easy installation of MTP/MPO assemblies also saves lots of operating time.

Application:

Production lines

cable production line

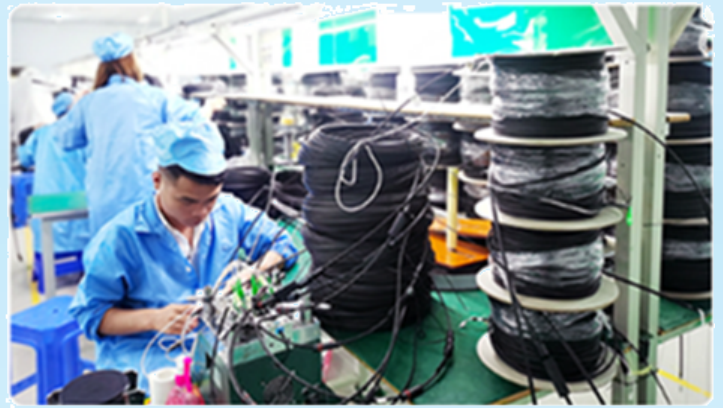

patch cord production line

connector production line

FTTA cable production line

FTTH cable production line

MPO cable production line

PLC production line

WDM production line
