

Description:

ODF 48 core Optical Fiber Distribution with splice tray

An optical distribution frame (ODF) is a frame used to provide cable interconnections between communication facilities, which can integrate fiber splicing, fiber termination, fiber optic adapters & connectors and cable connections together in a single unit. It can also work as a protective device to protect fiber optic connections from damage. The basic functions of ODFs provided by today's vendors are almost the same. They come into different shapes and specifications.

Features:

1. Two styles of left/right rotation
2. Equipped with cable arrangement on the front
3. High density
4. Can be used in 19" standard distribution frame
5. Front mark on the plate is easy for identification and operation

Application:

CATV

LAN/WAN

Fiber to the home (FTTH)

Telecommunications subscriber loop
